#### **DETAILED ACTION**

#### Claim Objections

Claim 31 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 31 contains limitation "taking a derivative of the current transient after time to" cited in the parent claim 25.

#### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1-3, 6, 9-15, 18, 21-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bakker (US 634683) in view of Haberland (US 5110435).

Bakker discloses a time-of-slight mass spectrometer, comprising:

an accelerator for accelerating an ion beam along a trajectory (FIG. 1, elements a1-a3);

a beam gate for controllably interrupting and restoring the ion beam (FIG. 2, element s1);

beam current measurement means (Column 7, line 19-20) disposed along the trajectory at a predetermined distance, L (FIG. 2, element L), from said beam gate; control means for providing beam gating/deflecting signals to said beam

Art Unit: 2853

gate/deflector that controllably interrupt and restore the ion beam (FIG. 1: a corresponding control means for controlling the deflection of element s1);

time-of-flight measurement means for measuring the times-of-flight of components of the ion beam over said distance, L (column 7, line 14-22 and FIG. 2, element L); and a time-of-flight analyzer to analyze said times of flight of components of the ion beam in order to provide output information relative to mass or size (column 7, line 14-22).

Referring to claims 2, 14: further comprising display means for displaying the times-of-flight of components of the ion beam (FIG. 1, element 6).

Referring to claim 3: wherein the time-of-flight analyzer calculates the size or mass distribution of components of the ion beam (column 7, line 14-21), and the apparatus further comprises display means for displaying the size or mass distribution of the components of the gas cluster ion beam (FIG. 1, element 6).

Referring to claims 6, 15, 18: wherein the time-of-flight analyzer calculates the size-to-charge-ratio distribution of components of the ion beam, and the apparatus further comprises display means for displaying the mass-to-charge-ratio of the components of the ion beam (column 7, line 14-22).

Referring to claims 9, 21: wherein the beam current measuring means comprises a faraday cup for collecting beam current signals (FIG. 1, the element covers elements 23-26).

Referring to claims 10, 22: wherein the accelerator accelerates the ion beam to a known energy in the range of from about 1 keV to about 50 keV (FIG. 1,element 10: 3.5 keV).

Art Unit: 2853

Referring to claims 11, 13: wherein the beam gate/deflector switches the beam on or off or from the first trajectory to the second trajectory during a time that is shorter than the time-of-flight of the ion beam particles of mean mass as they travel said distance, L (FIG. 2).

Bakker does not disclose an apparatus for gas cluster ion beam (GCIB) processing including mass or cluster size diagnostics for improving GCIB workpiece processing comprising a vacuum vessel, a gas cluster ion beam source within the vacuum vessel for producing a gas cluster ion beam, and workpiece holding means disposed along the trajectory for holding a workpiece for gas cluster ion beam processing.

Haberland discloses an apparatus for gas cluster ion beam (GCIB) processing is developed from a high resolution time-of-flight mass spectrometer to experimentally investigate the cluster size distribution (Abstract). The apparatus comprises a vacuum vessel (FIG. 1, element 5), a gas cluster ion beam source within the vacuum vessel for producing a gas cluster ion beam (FIG. 1, element 1), and workpiece holding means disposed along the trajectory for holding a workpiece for gas cluster ion beam processing (FIG. 1, element 25).

Therefore, it would have been obvious for one having ordinary skill in the art at the time the invention was made to develop the time-of-slight mass spectrometer disclosed by Bakker such that comprising a vacuum vessel, a gas cluster ion beam source, and workpiece holding means for holding a workpiece for gas cluster ion beam processing instead of ion beam processing as disclosed by Haberland. The motivation of doing so is to obtain an apparatus for gas cluster ion beam (GCIB) processing that is able to experimentally investigate the cluster size distribution as taught by Haberland (Abstract).

### Allowable Subject Matter

Application/Control Number: 09/904,919

Art Unit: 2853

2. Claims 25-30, 32-35 are allowed and claims 4-5, 7-8, 16-17, 19-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Referring to claims 4, 7, 16, and 19: The most pertinent art fails to disclose wherein the time-of-flight analyzer calculates the size or mass distribution by analyzing the beam current fall-off characteristics when the gas cluster ion beam is interrupted. Therefore, the claimed invention is not disclosed by the cited prior art.

Referring to claims 5, 8, 17, and 20: The most pertinent art fails to disclose wherein the time-of-flight analyzer calculates the size or mass distribution by analyzing the beam current rise characteristics when the gas cluster ion beam is restored. Therefore, the claimed invention is not disclosed by the cited prior art.

Referring to claim 25: The most pertinent art fails to disclose wherein the processing step further comprises the steps of taking a derivative of the current transient after time to.

Therefore, the claimed invention is not disclosed by the cited prior art.

Claims 26-30 and 32-35 are allowed because they depend directly/indirectly on claim 25.

## Response to Arguments

Applicant's arguments with respect to claims 1, 12, 23-24 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LAM S NGUYEN whose telephone number is (703)305-3342. The examiner can normally be reached on 7:00AM - 3:30PM.

Application/Control Number: 09/904,919

Art Unit: 2853

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, STEPHEN D MEIER can be reached on (703)308-4896. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0956.
